3.EXECUTION

3.1. EXAMINATION

- A. Examine and verify site conditions: Verify that prepared openings are sized and located in accordance with architects' recommendations. Verify that blocking, reinforcement, and anchoring devices are the correct type.
- B. Do not begin installation until substrates finishing operations are completed, including finish painting.

3.2. PREPARATION

- A. Coordinate and Furnish: Anchorages, setting drawings, diagrams, templates, instructions, and directions for installation of items having integral anchors embedded in concrete or masonry construction. Coordinate delivery of such items to the project site.

3.3. INSTALLATION

- A. Locate grab bars at heights specified by the American with Disabilities Act, (ADAAG). Consult with your local code authorities and the American with Disabilities Act to insure the proper location of grab bar installation.
- B. Install accessories according to manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.
- C. Grab Bars: Install to withstand a downward load of at least 250 lbf (1112 N), when tested according to ASTM F 446.

3.4. CLEANING

- A. At completion, clean surfaces in accordance with Ponte Giulio's clean up and maintenance instructions given in the product data sheets.

3.5. PROTECTION

- A. Protect installed products from damage until project completion. Replace damaged products.
